

Instructions for the 15kV VCP-W 25-63kA Simple Manual Ground and Test Device

Eaton Electrical
Power Components Division
Moon Twp, PA. U.S.A. 15108
JULY 2016

**Figure 1: Device shown with upper terminals grounded
Torque .375-16 (Grade 5) Hardware to 20ft./lbs.**

**Figure 2: Device shown with lower terminals grounded
Torque .375-16 (Grade 5) Hardware to 20ft./lbs.**

INTRODUCTION

⚠ WARNING

READ AND UNDERSTAND THESE INSTRUCTIONS BEFORE ATTEMPTING TO USE THIS DEVICE. IMPROPER USE CAN RESULT IN DEATH, BODILY INJURY AND/OR PROPERTY DAMAGE.

Type VacClad-W switchgear assemblies are designed with all the bus work completely insulated for safety. Since the current carrying parts are not readily accessible VCP-W Manual Grounding and Testing Device is designed for insertion into the breaker compartment to gain access to the primary stationary contacts. It provides a convenient means to:

1. Ground a circuit for maintenance work;
2. Apply potential for cable testing; and,
3. Access both bus and line circuits for “phasing out” tests.

⚠ CAUTION

BECAUSE OF THE UNIQUE APPLICATION AND VAST VARIETY OF SYSTEM AND USERS REQUIREMENTS, SPECIFIC OPERATING PROCEDURES MUST BE DEVELOPED BY THE USER. FAILURE TO DEVELOP THESE PROCEDURES COULD LEAD TO IMPROPER USE OR OTHER MORE SERIOUS CONSEQUENCES.

DESCRIPTION

The device consists of a draw-out element that can be inserted into a circuit breaker compartment in the same manner as a type VCP-W circuit breaker. It includes six terminals and ground bus connections. Each terminal is isolated from each other and the bus connection by insulating barriers. The upper and lower terminals are accessible by removing the respective front panel. The ground connection is located in the lower front section of the device.

VacClad-W switchgear is a two-high arrangement. In the lower compartment the top terminals normally connect to the main bus and the bottom terminals normally connect to the incoming line or feeders. In an upper compartment, the opposite normally holds true, i.e., the top terminals connect to the incoming line or feeders and the bottom terminals connect to the main bus. This must be verified for each application. Because of this two-high arrangement, the bus and the line positions of the grounding and testing device terminals will vary depending upon whether the device is used in an upper or lower compartment.

Therefore, **IT IS MOST IMPORTANT THAT THE BUS OR LINE TERMINALS BE CORRECTLY IDENTIFIED FOR EACH COMPARTMENT BEFORE USING THIS DEVICE.**

STYLE NUMBERS

The following style numbers are available for the Simple Manual Ground & Test Device (SMG&TD). These devices can be ordered with Direct Roll-On-Floor (ROF) wheels for use with Direct-In-Cells.

Style Number	Description	Equivalent ROF Style Number
66A5092G02	1200/2000A Top/Bot 50kA	66A5092G62
66A5092G03	3000A Top/Bot 50kA	66A5092G63
66A5092G04	1200/2000A Top 50kA	66A5092G64

OPERATION

Grounding and testing device is a safety-related device. It must be recognized that **IMPROPER USE CAN RESULT IN DEATH, SERIOUS PERSONAL INJURY, OR PROPERTY DAMAGE.**

That is why it is most important that user develop specific and safe operating procedure for its use.

The following general safe practices are recommended:

- Store the device in a clean, dry area free from dust, dirt, moisture, etc.
- Keep all insulating surfaces, which include primary support insulation barriers, clean and dry.
- Check all primary circuit connections to make certain that they are clean and tight.
- Permit only authorized trained personnel to use this device.
- **TAKE EXTREME CARE WHILE USING THIS DEVICE TO AVOID CONTACTING “LIVE” OR “HOT” (ENERGIZED) TERMINALS.**
- **CORRECTLY IDENTIFY LINE AND BUS TERMINALS FOR THE BREAKER COMPARTMENT BEFORE USING THIS DEVICE.**
- Check for correct code plates on the device. Do not attempt to force the device into the cell. See appendices A, B & C if you have code plate interference.

The grounding of either upper or lower terminals is accomplished by connecting grounding links (provided with the device) from either the upper or the lower terminals to the device ground connection. Cable testing or “phasing out” testing may be accomplished by connecting suitable test equipment, as required to the terminals.

Appendix A – Code Plate Reference

The chart below shows a summary of the code plates that are on our Eaton breakers. In order to avoid an interference issue on this particular ground and test device you may need to change the code plates. We apologize for any inconvenience when you encounter code plate interference. The best solution for resolving the interference is to obtain code plates that match the breakers being used. Cross reference this list to find the correct code plates to use. See appendices B & C for information on making code plates.

REF: 1A30260

1. MAKE BLANK PLATE PER FIGURE 1.
2. REMOVE MATERIAL PER TABLE AND FIGURE 2 OR 3 AND ADD PROTECTIVE FINISH.

CODE PLATE FOR VC-W CELLS

TYPE K=1 (5) CYCLE BREAKERS* REMOVE MATERIAL AS BELOW			
BREAKER	RATING	LEFT PLATE *	RIGHT PLATE
50VCP-W25	1200A 2000A 3000A	A2 C1 D2 E1 A2 C1 D1 E1 E2	A2 B1 C1 D1 E2 ↓
50VCP-W40	1200A 2000A 3000A	A2 C1 D2 E1 A2 C1 D1 E1 E2	A2 B1 C1 D1 E1 ↓
50VCP-W50	1200A 2000A 3000A	A2 C1 D2 E1 A2 C1 D1 E1 E2	A2 B1 C1 E1 ↓
50VCP-W63	1200A 2000A 3000A	A2 B2 C1 E1 ↓	A2 C1 A1 B1 C1

ENGINEERING REFERENCE

1. DETAIL PLATES ARE SAME AS VAC-CLAD (693C436), EXCEPT C1 MATERIAL REMOVED VC-W FIGURE 1.
2. VAC-CLAD MOUNTS PLATES WITH .344/.334 DIA HOLE TO LEFT VC-W MOUNTS PLATES WITH A .344X.469 RD END SLOT TO RIGHT (LEFT PLATE IS LEFT AS VIEWED FROM FRONT OF CELL FOR BOTH).
3. .25 THICK SPACERS MUST BE PLACED BETWEEN CODE PLATE AND AND MOUNTING PLATE FOR 50VCP-W40, 50VCP-W50, 50VCP-W63, 150VCP-W40, 150VCP-50 AND 150VCP-63 ONLY, (SEE FIGURE 4).
4. MATERIAL TO BE .179 THICK LOW CARBON STEEL, TOLERANCES ±.010 UNLESS OTHERWISE SPECIFIED.
