

FAT10 Attic thermostat

80-130F, surface mount, 13A

Item #: 411233

Variant: 120V 1~ 60Hz

Attic fans help homeowners save on power and repair bills. Moving heated air out of the attic during the cooling season reduces the load on a home's air-conditioning system. Circulating air trapped in the attic during humid conditions speeds drying, reducing mold growth and early decay of the roof's structural members.

Installing a **FAT10** Attic Thermostat on the attic fan is a simple job that helps you make efficient use of electricity. Adjustable range is between 80° and 130°F. Color: Beige.
