## Description

---

Research environments using many different types of chemicals have special storage requirements. Whether using acids, bases or solvents, it is critical that incompatible liquids are segregated to avoid disastrous explosions or fire. The SDS (Safety Data Sheet) should be reviewed to determine chemical characteristics and recommended storage practices.

Safely store highly corrosive liquids such as phenol, nitric acid and sulfuric acid in these wood laminate storage cabinets. Long lasting wood construction along with stainless steel handles and hinges provide exceptional resistance to corrosion from harsh acids. Shelf adjusts on 1-1/4" (32-mm) centers to accommodate a wide variety of containers. Cabinets include adjustable leg levelers, Haz-Alert™ reflective labels, and double key set for safety and security. It also includes a removable, easy-to-clean polyethylene work surface top that is recessed 5/8" (16 mm) to help contain incidental leaks.
