

Telescopic Gauge Set

Item number: 155-903

Images

Description

A set of six Mitutoyo transfer gauges that enables the diameter of holes, bores or grooves to be measured with outside micrometers or calipers. In operation the spring loaded plunger of a gauge is allowed to expand within the feature to be measured and then locked in place using the knurled rotary control on the end of the handle. In practice some manipulation is necessary to ensure that the minimum size has been captured, after which the gauge is carefully withdrawn so that the dimension across the contact surfaces can be measured.

- Enables small hole, bore and groove measurement using existing workshop tools.
- Knurled finish provides secure handling and easy locking.

Features

Inch-Metric:	Inch
Gauges included:	155-121 155-122 155-123 155-124 155-125 155-126
Digital/Analog:	Analog
Delivered:	With plastic wallet
Mass:	15 25 35 75 80 100
