

**Morse Adaptor to Handle Plastic Drum with Omni-Lift Karrier**

**Part # AP405**

Adaptor for handling 55 gallon poly drums in Morse 405 series drum racking equipment. Drums must have a suitable top rim.

405 Series Omni-Lift Drum Karrier will also handle a 55 gallon steel drum with AP405 installed.

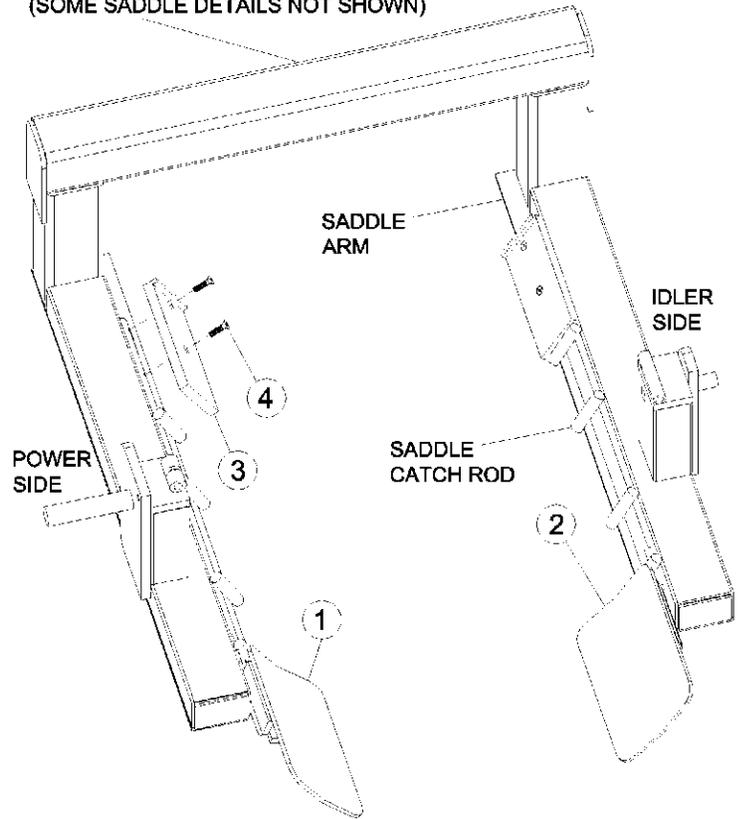

**Installation / Assembly**

For each Adaptor Half, remove the two socket head cap screws (item #4) that fasten the chine catch (item #3) to the support rod weldment (item #1 & #2).

Slide the support rod through the space between the catch rods and the saddle arms on the 405 saddle assembly until the support pads rest against the first catch rod. This may require using a mallet.

Fasten chine catches (item #3) to the support rods with the 405 saddle catch rods flush with the bottom of the chine catches. The supports (items 1 and 2) are not interchangeable, and must be installed on the appropriate side in order for the chine catches to line up properly.

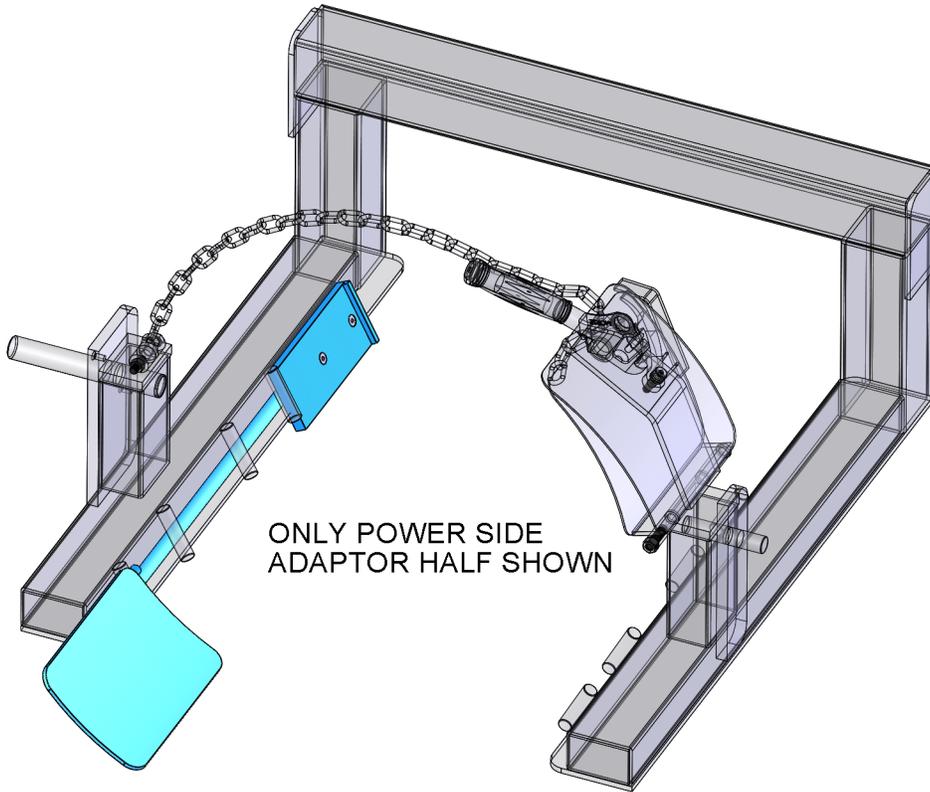

SADDLE WELDMENT USED ON MORSE MODEL 405 (SOME SADDLE DETAILS NOT SHOWN)

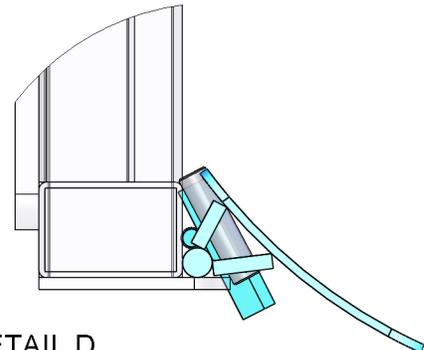

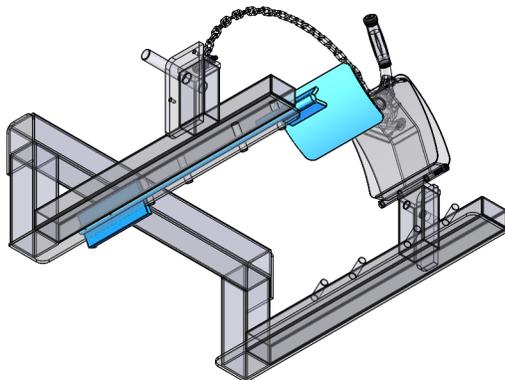

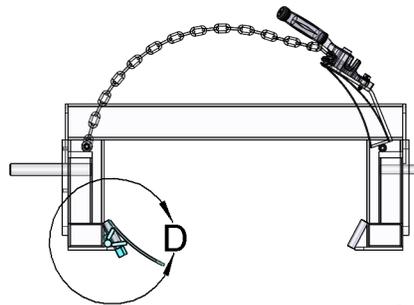

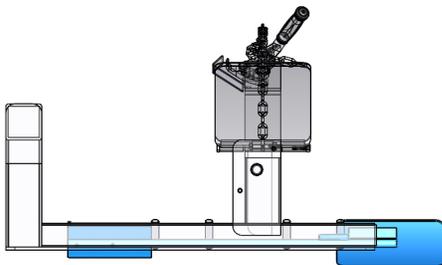

ITEM #	QTY.	PART #	DESCRIPTION
1	1	2400-P	SUPPORT WELD, POWER, AP405
